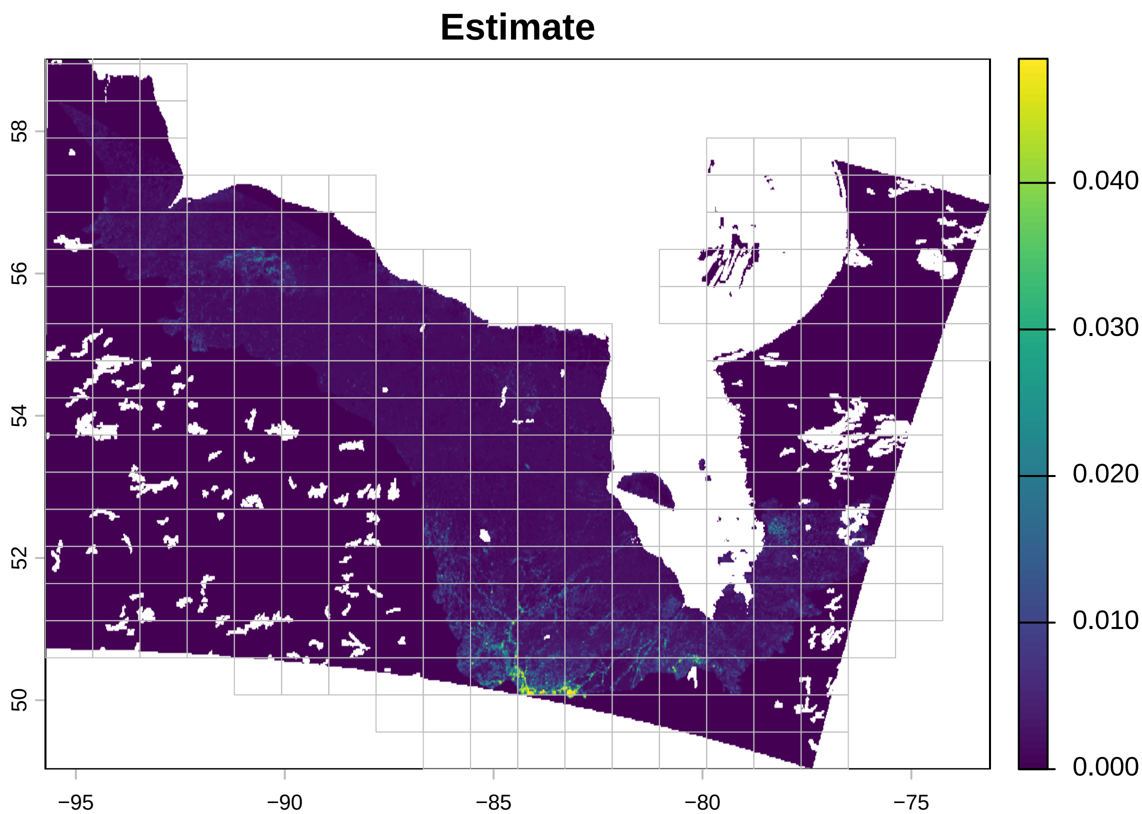
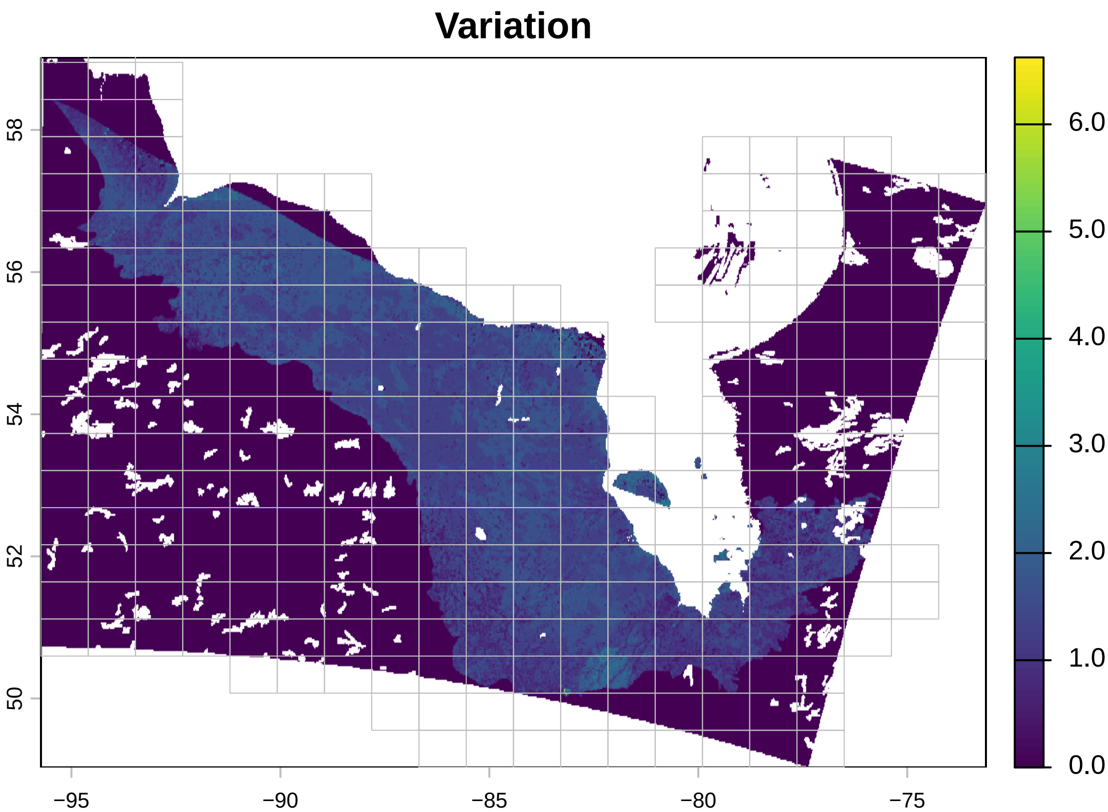
SDM Evaluation Tool Report

Settings

- Evaluator: (x@y.z, XYZ) [ID: testuser]
- Evaluation: start time 2026-02-12 21:42:31, end time 2026-02-12 21:42:31 (duration: 4 minutes)
- Model: BAM v5 Can 71, BAM version 5 Canada model in BCR 71 [ID: bam_v5_can71]
- Species: Bay-breasted Warbler (*Setophaga castanea*) [ID: BBWA]
- Deployment: BAM: population assessment [ID deployment1]

Predictions

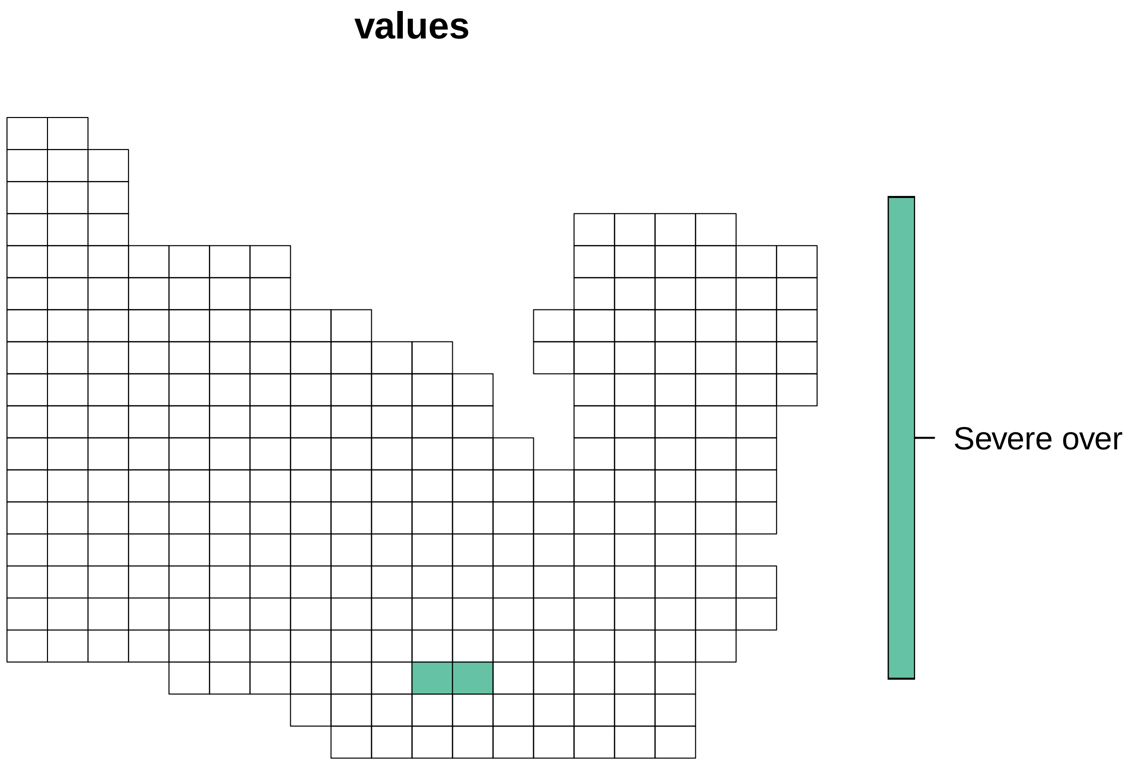




Question 1 **Question**: Identify the areas on the map where predictions are inaccurate.

Answer:

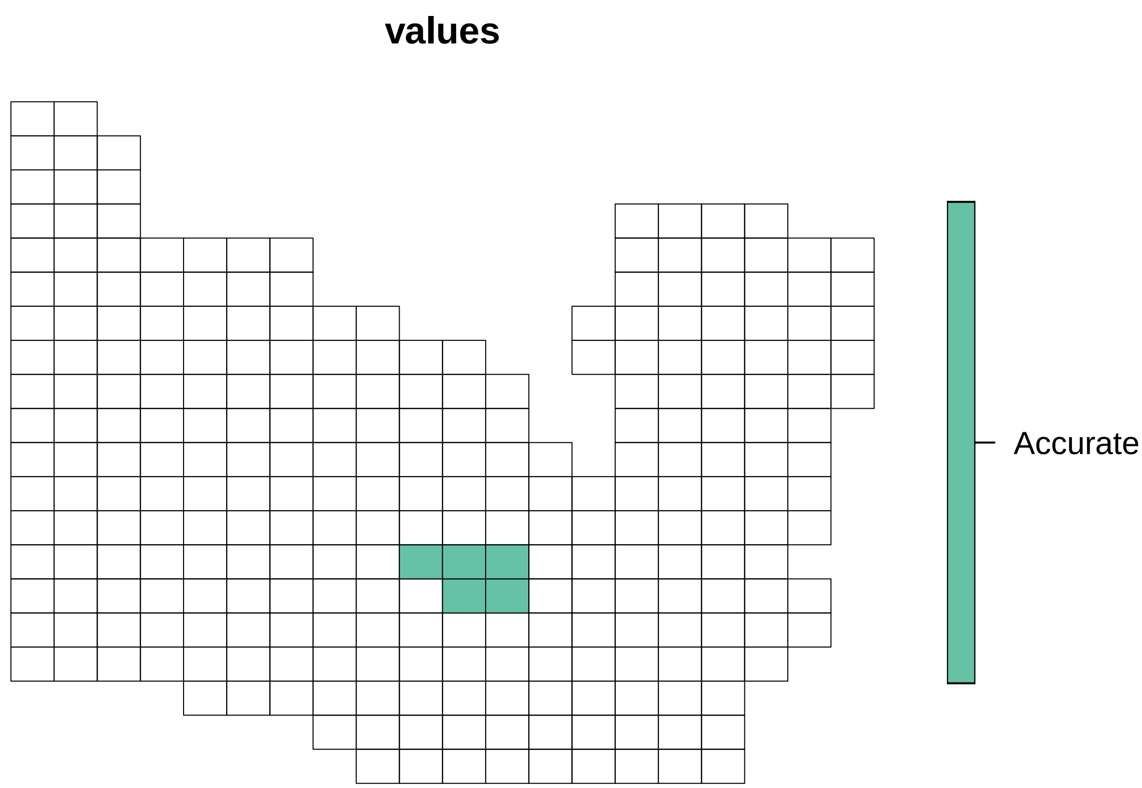
values	subunits
Severe over	51, 52
Moderate over	NULL
Accurate	NULL
Moderate under	NULL
Severe under	NULL
Unknown	NULL



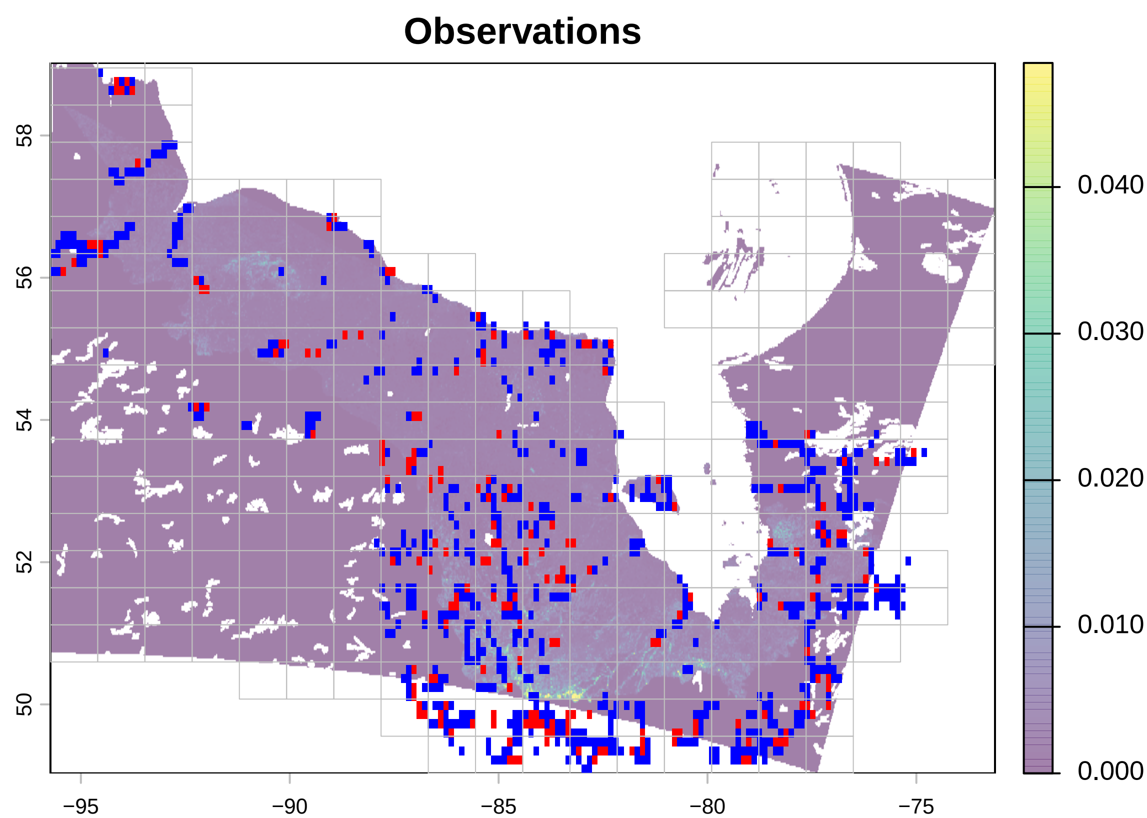
Question 2 **Question**: Identify areas on the map where uncertainty does not align with your understanding of data limitations, known habitat complexities, or other sources of uncertainty.

Answer:

values	subunits
Too high	NULL
Accurate	111, 112, 130, 131, 132
Unknown	NULL



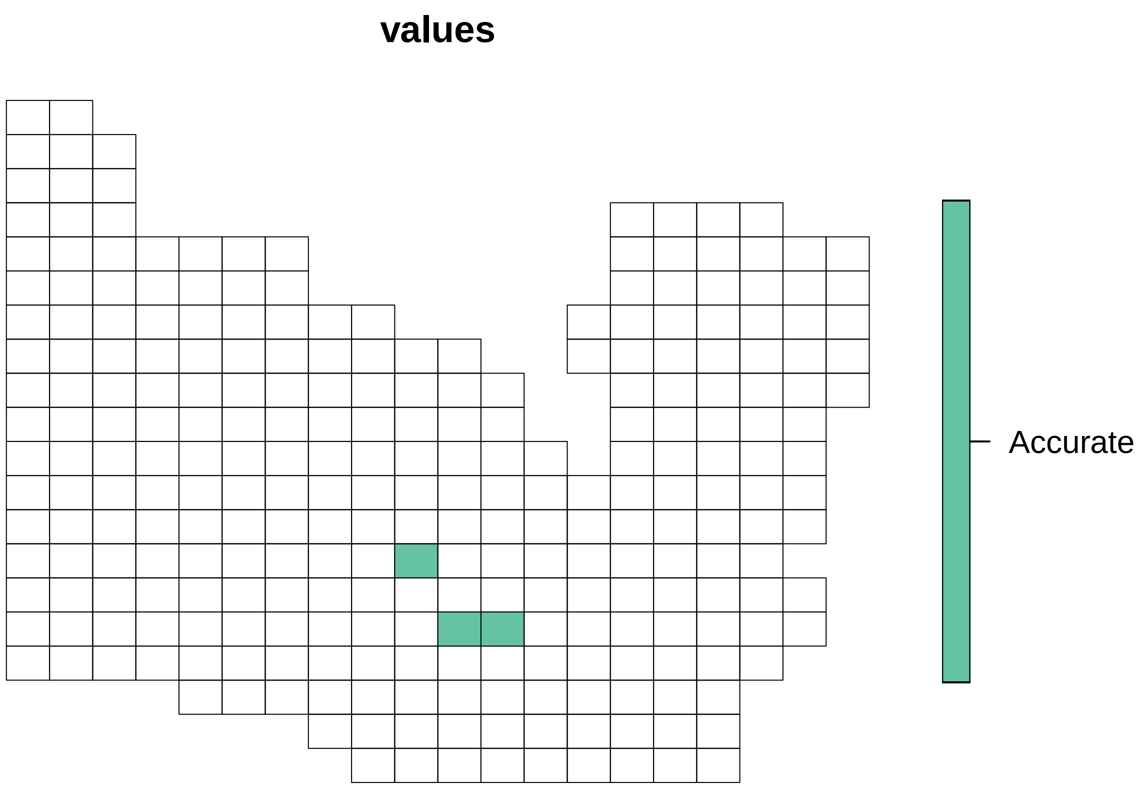
Observations



Question 1 **Question**: Are there areas where you are concerned about potential bias in the data? Identify areas with potential bias in the data.

Answer:

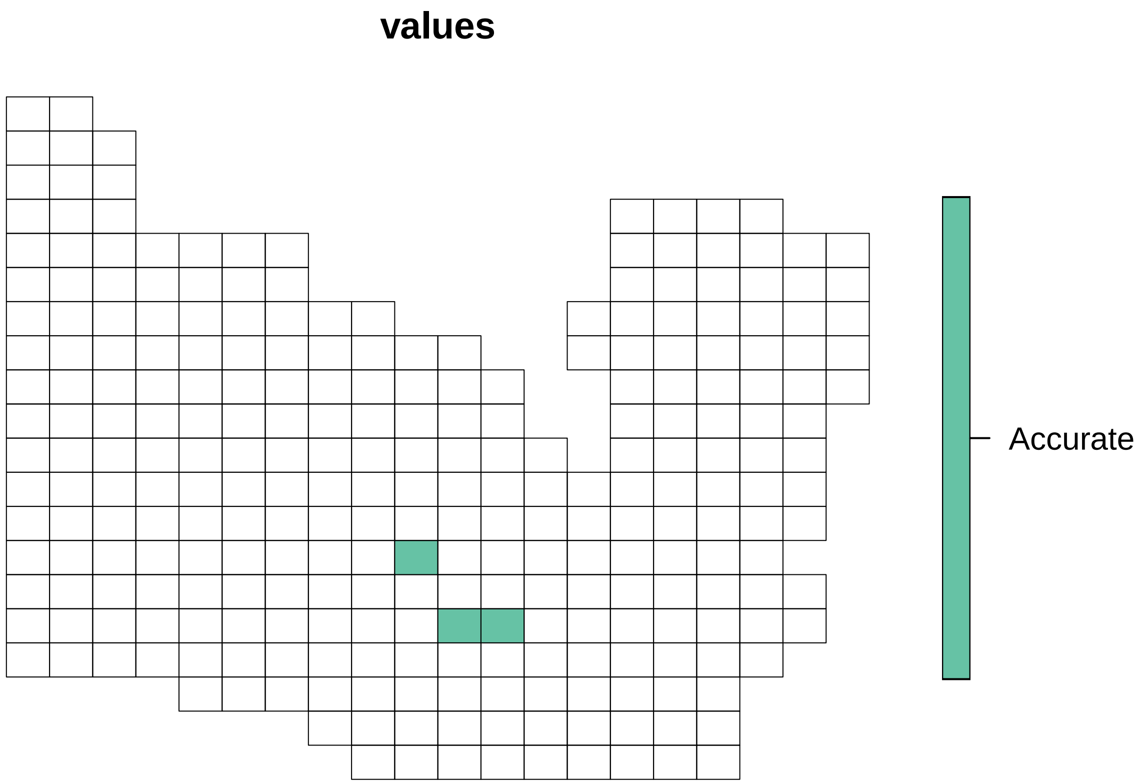
values	subunits
Very biased	NULL
Moderately biased	NULL
Accurate	91 , 92 , 130
Unknown	NULL



Question 2 **Question**: Are there areas where this species is not sufficiently sampled? Identify areas that are not sufficiently sampled.

Answer:

values	subunits
Very undersampled	NULL
Moderately undersampled	NULL
Accurate	91 , 92 , 130
Unknown	NULL



Question 3 **Question**: How concerned are you about the distribution of counts?

Answer: Not at all

Question 4 **Question**: If so, explain. What is an appropriate truncation values (i.e. highest count)?

Answer:

Question 5 **Question**: How concerned are you about the temporal distribution of detections?

Answer: Slightly

Question 6 **Question**: If so, explain. What is an appropriate truncation values (i.e. minimum year)?

Answer: Seems off

Question 7 **Question**: How concerned are you about the description and treatment of potential biases in the data, as described in the model metadata?

Answer: Uncertain

Question 1 **Question**: How concerned are you about missing predictor interactions or nonlinear relationships?

Answer: Slightly

Question 2 **Question**: What interactions or nonlinear relationships are missing?

Answer: Check.

Question 3 **Question**: How concerned are your about the reported relative importance of predictors?

Answer: Extremely

Question 4 **Question**: Which predictors would you expect to be more or less important and why?

Answer: X

Question 5 **Question**: How concerned are you about the appropriateness of the modeling algorithm for the model objectives and application?

Answer: Very

Question 6 **Question**: How concerned are you about how well the modelling framework addresses important statistical assumptions?

Answer: Moderately

Question 7 **Question**: How concerned are you about how well important biological assumptions are explained and justified?

Answer: Slightly

Question 8 **Question**: What other concerns or comments do you have about model complexity?

Answer: None

Question 9 **Question**: How concerned are you about missing predictor interactions or nonlinear relationships?

Answer: Very

Question 10 **Question**: What interactions or nonlinear relationships are missing?

Answer:

Question 11 **Question**: How concerned are your about the reported relative importance of predictors?

Answer:

Question 12 **Question**: Which predictors would you expect to be more or less important and why?

Answer:

Question 13 **Question**: How concerned are you about the appropriateness of the modeling algorithm for the model objectives and application?

Answer:

Question 14 **Question**: How concerned are you about how well the modelling framework addresses important statistical assumptions?

Answer:

Question 15 **Question**: How concerned are you about how well important biological assumptions are explained and justified?

Answer:

Question 16 **Question**: What other concerns or comments do you have about model complexity?

Answer:

Model Fit

metric	value
prevalence	0.0257576
run_complete	32.0000000

oaccu	0.9082747

Question 1 **Question**: How concerned are you about the adequacy or appropriateness of the validation metrics?

Answer: Not at all

Question 2 **Question**: What are the metrics that should be used and why?

Answer: BIC

Question 3 **Question**: What other concerns do you have about model performance?

Answer: None

Question 4 **Question**: How concerned are you about the adequacy or appropriateness of the validation metrics?

Answer: Very

Question 5 **Question**: What are the metrics that should be used and why?

Answer:

Question 6 **Question**: What other concerns do you have about model performance?

Answer: x

Predictor Raster

Question 1 **Question**: How concerned are you about inaccuracy in the model predictors?

Answer: Not at all

Question 2 **Question**: If so, describe the predictor(s) and the areas of concern.

Answer:

Question 3 **Question**: How concerned are you about the spatial resolution of the predictor variables?

Answer: Moderately

Predictor Metadata

Question 1 **Question**: How concerned are you about missing predictors?

Answer: Uncertain

Question 2 **Question**: What predictors are missing and why?

Answer: Seems fine

Question 3 **Question**: How concerned are you about superfluous or inappropriate predictors?

Answer: Slightly

Question 4 **Question**: Which predictors should be removed and why?

Answer: Slope, it is ridiculous
